

# Science Current Event Summary

We use current events to evaluate Standard 5: *Students understand how scientific knowledge and technological developments impact communities, cultures, and societies.* This also allows a reading standard grade since we use LAPS strategies to read an article in order to summarize effectively.

**Title of Current Event:**

**Works Cited** (Correctly cite your source using pages 11 and 12 of student handbook)

**Who** (Who was involved...name of organism or researcher?)

**What** (What happened?)

**When** (When did this event occur?)

**Where** (Where did this event occur?)

**Why** (Why is this scientifically important?)

**How** (How is this related to what I have learned or other topics we have learned about?)

**Summary** (Write a summary of the article. Make sure to include evidence the author uses to support the main idea of their article. Take a few LAPS through the article and use CEAL paragraph writing skills for your summary.)
