

1. Which of the following scientists contributed most to the study of genetics? Explain what they contributed and why their contribution is best.
 - James Watson and Francis Crick
 - Rosalind Franklin
 - Walter Sutton
 - Reginald Punnett
 - Gregor Mendel
 - Charles Darwin

2. How has the decoding of the human genome changed our understanding of life? Use the terms adaptations, evolution, genes, mutations, and natural selection in your analysis (underline or **highlight** in the paragraph). What do you think may change in the future from understanding our genome?
